

Earth System Modeling Graduate Symposium

George Mason University, Fairfax Virginia

April 11, 2019

SYMPOSIUM TOPICS

Seamless Prediction of Weather and Climate

Climate change: Past and Future

Atmosphere-Ocean Interactions

Global Water Cycle

Climate Modeling

Land-Climate Interactions

Decadal Climate Variability

Paleoclimatology

Informing Climate Policy

Hosted by: Center for Ocean-Land-Atmosphere Studies at George Mason University

CALL FOR ABSTRACTS

SUBMISSION DEADLINE JANUARY 15, 2019

The Earth System Modeling Graduate Symposium will bring together graduate students from across the mid-Atlantic states to share research on climate. A wide variety of climate-related topics will be considered for presentation and travel support is available. We feel that the more opportunities that graduate students are given to share their own research and to learn from others, the better scientists they will become.

The symposium will be held at George Mason University in Fairfax, Virginia, just 15 miles outside of Washington D.C.

For more information, please contact a member of the symposium organizing committee. To submit an abstract visit
