	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
1.	Alex	Vic		Inconclusive	ED Dr advised that Stroke was caused by a blood clot. Tests results showed a narrowed artery in the neck. Surgeon advised that the Stroke was caused by the narrowed artery and denied any connection with the COVID vaccine
2.	Rebecca	USA	1953		I was willing to get the vaccine as I am over 65, although in good health for my age. My husband, however, is immuno-compromised, with a heart condition, and with severe ankylosing spondylitis. Since the vaccine was initially touted as not only a manner in which to NOT get Covid, it was also touted as being a manner in which to stop the spread to others. Since we are both over 65, and don't have that many years left (our ability to create children well behind us), we felt that getting the vaccine, for us, would be appropriate, even though we had severe concerns over potential future complications the vaccine could cause. He got his first vaccine, and had no side effects. I then got my first shot, and also had no side effects. After his second shot he only had a sore arm. After I got my second shot, exactly 9 hours later I started feeling very "off" and during the next 3 hours steadily decline until I felt like I had been hit by a fleet of dump trucks, and felt that way for the next 48 hours. I was wracked with chills, shaking, nausea and diarrhea. I experienced pain in every fiber of my body, from head to toe, and a headache like I have never had in my life. My vision was blurred and I could not see clearly. Whether or not it was due to the headache I do not know. I did not have a fever at any point during all of this. On the 3rd day following the 2nd shot I improved significantly, but it took two more weeks before I felt normal again. Given the reaction I had to the 2nd shot, I would NOT be willing to make myself go through it again if the government and

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					employers start demanding boosters. The initial information available indicates that whatever reaction you had to the 2nd shot is what you can expect with the boosters. I'm not going to use up my available sick days each year, AND sacrifice some of my vacation days to the needed recovery time, PLUS force myself to go through that torture each time. For the record, I fully support those that decide to choose NOT to get any of the vaccines. If I was younger, and of child bearing age, I would have refused to.
3.	Rex	WA	1944	Inconclusive	ED Dr advised that Stroke was caused by a blood clot. Tests results showed a narrowed artery in the neck. Surgeon advised that the Stroke was caused by the narrowed artery and denied any connection with the COVID vaccine
4.	Karen	NSW	1977	my gp refused to report it and said I needed to so I reported to TGA	<p>I am 45. I was fit and healthy and playing soccer up until the Sydney lockdown.</p> <p>After my first pfizer shot I had: Instant palpitation feelings as though I had drunk too many energy drinks. This was continuous. I could feel my pulse pumping in various parts of my body like in my ankles. The heaviest period in my life.</p> <p>Chest pain at night while trying to sleep on my side.</p> <p>I found it hard to exercise - was getting out of breathe just walking.</p> <p>My gp of 20 years basically said I had to get the 2nd shot when I told him my side effects and that I wasn't getting the 2nd shot. He told my story after story of covid deaths and side effects. After the second pfizer shot I had the same symptoms from the first shot plus:</p> <p>constant chest pain - no longer just at night while sleeping on my side.</p> <p>really out of breathe - short walks/ walking up or down stairs / talking on the phone. tingling in hands and feet / numbness. These symptoms all started mild and got worse over time. A CT scan with the dye showed pericarditis. The gp said to see a cardiologist and I asked if the government</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>would be covering the fee. He said no and if I didn't want to pay for treatment to go to hospital. I have been to hospital twice. The first time they did blood tests, ECG and ultrasound and found nothing. They sent me home with naproxen and said I'd be better in 3 days and see the gp if further problems. I took myself to hospital after having numb and tingling hands and feet for about 5 hours straight. Usually this would come and go. They did the same tests as the first time but kept me overnight and sent me to cardiology for an echo which came back without any problems. They sent me home and said I'd be better in 15 days after taking colchicine. I did not recover and am on my third bottle of colchicine tablets. The gp said take nurofen and a tablet to stop the nurofen causing stomach problems. The symptoms are all still there but have eased slightly. My fingers became extremely swollen and painful. The gp said to stop the nurofen. That was about 2 weeks ago. The swelling came down a bit but my fingers are still a bit stiff, and of course still numb. I just had a brain CT scan so the gp can work out the cause of numbness. I came back normal but the report said an MRI is suggested. My 21 yr old daughter also had the same symptoms that I did after her first pfizer shot. She didn't get her 2nd shot and the gp said she can have the AZ. I asked whether it would be suitable to get another vaccine while she is still experiencing these symptoms and he said "well you could wait if you like". My other 3 children have not had the vaccine as they are not guinea pigs, and I can't see the benefit when looking at the risk v's reward at their age.</p>
5.	Sarah	Canada	1987	Inconclusive	Blood clots and puss in ball form the size of a lacrosse ball in left armpit
6.	Rebecca	NSW	1969	Recorded as vaccine injury	Grace is 17 was not meant to get vaccine due to medication she takes .Got vaccine out of fear .Mother Rebecca was pressured to get vaccine by a family member

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
7.	Ashley	NSW	1991	Recorded as vaccine injury Described as "rare"	As a result of receiving the vaccine I developed ASIA syndrome, an autoimmune condition caused by the vaccine. There is no treatment for this, only symptom management. As a result of 'trying to do the right thing' I now need to be on heart and anxiety medication, fork out thousands of dollars to see specialists and be subject to endless amounts of tests. But it's okay because I'm the 'one in a million' that had an adverse reaction, one that I could've avoided had there been more study and information provided to me. One that could've been avoided had results like mine not been under-reported or blamed on other causes. I used to be able to run , dance, deadlift heavy weights...Now I get puffed out walking. I am young and I was fit and healthy with a whole, full life ahead of me.
8.	Peter	Tas	1943	Inconclusive	Peter was 78 years old and had been diagnosed the week earlier with liver cancer. We were all told by the dr that it was non aggressive and that he would live for quite a long time with this. His GP insisted he get the vaccine as he was elderly. Peter lived alone and was capable of shopping, cooking, cleaning and doing everything on his own. 1 day after the vaccine he lost all strength in his body. He called us asking for help as he couldn't get off the couch to go to the bathroom. He then lost control of his bowels. He called himself an ambulance and was hospitalised. 2 days later he passed away. We were told it was a result of the cancer - the same cancer that we were told a week prior was non aggressive. He was in so much pain in hospital, it was a terrible death. We called his GP to advise of his death after the vaccine and the Dr wouldn't take our calls.
9.	Rhett	Vic	1978	Inconclusive	Prior to vaccine never had issues with blood pressure or vertigo. Told by dr probably caused by vaccine and to go to hospital if it gets worse

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
10.		WA	1933	Was not reported by hospital	I am a nurse who looked after this patient. Patient came to our hospital and was unable to communicate. Unable to toilet by self and unable to walk. Pt lives at home alone and has a career come help with activities of daily life. Pt was like this for 4-5 days. I wasn't at work after that so I don't know what happened after.
11.	Anna	Vic	1976	Not reportrd	
12.	R	ACT	2005	Described as "common"	Recipient was floppy and lethargic unable to sit, stand, talk properly or eat properly for 24 hours after vax. GP said they'll be ok and no Further medical attention or help offered or sought. Went home to cry, apply homeopathic remedies and Pray.
13.	Mark	Qld	1961	None reported by self	As a Queensland health employee I was threatened, coerced and fed misinformation or misleading information as to the outcome of my employment status if I did not get vaccinated. I tried unsuccessfully to gain other employment. I felt suicidal as I would lose everything if I was not earning a wage that I have deemed livable. I unwillingly and with duress submitted to the first AZ vaccine. On my informed consent form I wrote I was submitting to the first shot under duress and threats from Queensland health with the lose of my job. 3 to 4 days after the shot I started to feel fatigue. I continue to feel irratic heart beat, shortness of breath, continued headache for 4 weeks so far. I had blood tests a week before the vaccination and my doctor was very pleased with the results.
14.	Rebecca	NSW	1987	Recorded as vaccine injury	Went to the doctor a week before for clotting during menstruation. All bloods came back fine and checked for other facfors. Had the injection.... 3 days later had my period. Very very very heavy. Large clots passed and cycle was consitant for 3 weeks. Severity of blood loss decreased. Occasional spotting 5 eeks later. Fatigure set in 3 days after the vaccination.

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					Eztremrly tired and lethargic from 11am onwards and often require a nap or rest for a period of time before commencing the day. Exhaustion by the evening and often can not get out of bed in the morning due to severe exhaustion.
15.	Greg	Vic	1971	Inconclusive	Spent 2 days in bed with vaccine side effects and on 3rd day had a siezure...my wife found me unconscious and body convulsing. After coning too i was grey with sweats. 4th day tingles all down left side and confusion. Very dizzy and could not think straight. Doctors at hospital refusing to acknowledge its a result from the vaccine. Did not want it, but VIC state government mandated it for essential workers and I have 2 young girls so my choice was taken away from me
16.	Bradley	Qld	10/01/1979	Described as "rare"	<p>around 3-4 weeks after i had the second jab i noticed 2 small bald spots on my head, after another week the patches got bigger and more started to be visible on my head. i went and seen a general doctor, my first question to the doctor was, is this from the covid vaccine? i was told not likely, it might be a fungal infection on my head, i was given some lotion for my head and told it should go away.</p> <p>2 weeks after seen the doctor and using the prescribed lotion for my head, the condition was getting worse and my hair was falling out in clumps. i booked in with a skin specialist doctor and asked the same question in regards to the covid vaccine, it was not ruled out. the doctor did gave me different medication to try, i did for 3 weeks, my hair was not getting any better. i went back to the specialist doctor and he did a biopsy on my head, when the results came back from the biopsy i was told that my immune system had been affected by an introduced virus to my system the covid vaccine, and that my immune system was attacking my hair follicles on my head causing my hair to fall out. i was told it can be treated with more</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					medication and time. i have shaved my head and currently on the medication to try and get my hair back.
17.	Lisa	Vic	1968	Attributed to COVID	<p>After my first vaccine I had a fever a temperature chills fatigue headache/migraine and sore breasts. The second vaccine the same issues but</p> <p>2 days later my breast tenderness was severe especially on my right side of my body where I had the vaccine.</p> <p>I began to bleed heavily clotting...I am 3 years post menopause have not had a period ..it was not a period as I have no eggs it was like a shedding of my uterine wall which I was told by GP that can happen after the vaccination in women my age.</p> <p>I was never informed of this prior to the vaccine.</p> <p>I went for my regular Breast screen on 9/08/21 it was found i needed to go to Monash for further investigation ,where I had a further ultrasound and mammogram luckily no cancer was detected I believe my lymph nodes were enlarged due to the vaccine the doctor said this can occur sometimes, and also because i was on Hormone replacement again not once was i advised of this prior to the vaccine.</p> <p>I still suffer from headaches fatigue muscle soreness and continued to bleed until the 6th October 2021 .</p>
18.	Lyn	NSW	1951		Previous diagnosis of CFS that has been present in moderate form for last 30 years. After the jab, CFS has returned to original state which is bedridden or with short time around house. No attendance to anything outside home.
19.	Sjordi	NSW	1980	Inconclusive	My son experienced extreme dysphagia, difficulty breathing, some tingling in hands and arms, sleeplessness, and extreme anxiety. He is normally a totally relaxed individual, and anxiety has never been something he has

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					suffered from. My conclusion is he is suffering from a form of Guilian Barre syndrome.
20.	David		1993	Inconclusive	<p>4 days after second dose I woke up with a pain in my left breast. In the evening I started getting heart palpitations and went to ER. They diagnosed me with sinus tachycardia and low potassium. I was told to follow up with my doctor regarding the inflamed left breast. Followed up with doctor, got a ultrasound and they found inflammation they said it could of been prior trauma which I'm not sure how it could of happened.</p> <p>To cut it short, I've been to ER 10 times, hospitalised once as my troponin levels were increased. They then deemed it as a false positive.. this has happened twice now. I'm seeing a cardiologist as my heart rate rapidly increases with any movement. Constant shortness of breath, fatigue, weird muscle spasms, loss of appetite, weird vision problem.</p> <p>The doctors keep telling me maybe it's anxiety and put me on Escitalopram (anti depression meds)</p> <p>Also prescribed me with Valium.</p> <p>I know there's something now right in my body and I just want somebody to tell me what's going on.</p> <p>I'm 28 and I've lived my life without going to ER until I got my vaccine.</p>
21.	Maureen	NSW	1947	Recorded as vaccine injury	My oncologist recommended having the vaccines even though a 4th course of chemo for Ovarian Cancer was about to begin. The lump and pain in my arm has persisted since 5th July. It is painful enough to wake me every time I roll over onto my left side, meaning I have not had proper sleep for 4 months
22.	Angela	Vic	1966	Recorded as vaccine injury	Presented at local doctors on 28 May 21 for first dose Astrazenica vaccination as directed by boss from.Aged Care facility as all staff need to be vaccinated directive was sent to all employees.

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>Immediately felt pain at injection sight in arm, there was no bleeding. Felt sharp shooting pain. Returning home my arm continued throbbing. Could not go to work the next morning. Reported back to doctor and was dismissed and said it will get better. It did not get better. Ambulance called at 0630am 21 Jun 21. Taken to Rosebud Hospital. They didn't know what to do so discharged me around 11am as they needed the bed. They did not want to admit that I have suffered a severe NERVE DAMAGE reaction to the Astrazenica vaccination.</p> <p>Returned to Rosebud Hospital 23 Jun 21. Transferred to Beleura Private admitted into High Dependency Unit for 7 days on Ketamine Infusion. I had two falls while in the Private Hospital as I was left alone in the toilet. Im now under the care of Specialist Pain doctor. I'm living with depression and extreme anxiety.</p> <p>The pain never goes away it's a 4 to 6 out of 10. On a bad day it's an 8. I am really upset as I was a fit woman prior to the vaccination. I was not taking any medications. But now I have a cocktail of strong pain medications. I'm undertaking physiotherapy in an effort to overcome this nerve damage. The physiotherapy doesn't seem to be holding as it just stirs up the pain. I miss my job in Aged Care working in looking after the dementia and palliative residents.</p> <p>Many of my favourites have now passed away and I haven't been able to say goodbye. These residents have been asking to see me. And some can not fully understand what has happened to me and why I no longer come to work and care for them</p> <p>I am trying hard to overcome this nerve damage but the endless covid restrictions are limiting the types of activities I enjoy. Walking 5km is the only respite I have.</p> <p>Thank you for taking the time to read this short brief of my Adverse</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					reaction (nerve damage) after receiving the First Dose of Astrazenica vaccination Sincerely yours, Written on her behalf by: Greg S, OAM
23.	Allen	NSW	1965		I am a fit and healthy male in my mid-50's with no previous cardiac history. My employment background includes working as a Registered Nurse in ICU and Coronary Care Units. I received a single dose of AZ earlier this year. During the initial period 24-48 hours following vaccination I experienced a range of moderate issues such as high temperatures, sweats, shivering, malaise etc. About 7-10 days post-vaccination I started to become aware of heart palpitations that increased in both frequency and severity over the following few weeks. These palpitations, during the worst period about 4-5 weeks post vaccination, would be persistent and occur up to 6-8 times each day. I was persistently breathless on exertion during this period. On several occasions, the palpitations were accompanied by significant dizziness, but did not result in collapse. The condition gradually resolved spontaneously within 3-4 months.
24.	Melissa	Qld	1968	Inconclusive	First injection, no pain in arm. Sore eyes, little toe became very swollen and bright red. Some red dots appeared on my skin. Possible chest pain maybe indigestion. Nothing much. 3 days after second shot, sore arm, then other arm began to hurt. Itching started and intensified. My eyes got red, puffy, face red. Measles like rash all over legs, torso and upper thighs were stinging bright red like severe sunburn. Received adrenaline shot at doctors next morning plus hydrocortisone shot. Strong antihistamine administered. Heart rate and blood pressure high. Settled down within 4 hours after treatment. Burning was relieved. Facial swelling reduced. Discharged

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					around 5pm. Itching started 24 hours previously. I should've sought help earlier than I did.
25.	Charn	Qld	02/03/1991	Described as "rare" Inconclusive	Rush to hospital in a ambulance 6 days after vaccination jab 1st shot with chest and back pains feeling like a heart attack the doctors rule out all side effects to vaccine pifzer like clotting heart problems and breathing but were saying what I had had nothing to do with the jab I then was in and out of hospital for the next 3 days having chest seizures nd feeling nausea everyday still them telling nothing to do with the jab i was then released from redlands hospital in qld Brisbane because they said there was literally nothing more we could do and that I would have to seek help from my gp and was kicked out of hospital nd left in the cold as I told them my mum and dad are picking me up they will be half an hour but they said we need the bed so you will need to wait in area room where there was no seats nd no room so I left the hospital not knowing what's wrong with me left me scratching my head nd pretty much thinking I'm gonna die. Next day I followed up with my gp who told me that it's because of the vaccine jab I'm having these bad side effects hes seen it with alot of his patients im still shocked that the hospital lied to me. I am day 5 at home on perscription drugs that are barely work I have nausea allday and feel so weak all the time still getting small chest pains that feel like a heart attack and not sleeping well i cant work either so income is hard atm. All I hear is it's only a small percentage of people who go through it like it doesn't matter but it really does matter because the pain we go through and still go through is horrible and the health system are doing nothing to help us. This is me talking on my own experience
26.	Sara	Vic	1971	No explanation	My cognition has not been the same since my jab 11 days ago. I can't speak properly. It comes out as "jibberish" unrecognisable words sometimes and I forget common everyday words. I've always been known for how articulate

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>I am and excellent communication skills but I struggle to give my own name and address now. I leave home in the car to go to an appointment and completely forget where I'm going or how I got there. Disoriented most of the time. I constantly repeat myself because I don't remember that I've just said it. I get simple instructions and I've forgotten them 5 seconds later. My vision is blurry. My head pounds constantly. I'm having chest pain and sweating and clamminess all over my body. My hips down ache severely I always exercised daily and now it hurts to walk. I get episodes of numbness and tingling in limbs. And sometimes feel like I can't swallow properly. When I wear a mask now the symptoms are far more exasperated. I'm too scared to get my second jab. I got this one only to save my job in the health sector but I think I'd prefer to not work than get another dose.</p>
27.	joe	WA	1959	Inconclusive	<p>Swelling and pain in opposite elbow if injection 2 days after vax. Unsure if a vaccine reaction but no logical explanation. Doctors and nurses unsure. Ultrasound shows no damage and is normal. X-ray is normal. Bloods not done on doctor's advice after nurse suggested bloods be taken.</p> <p>I have never felt the cold and always walked in early mornings even in winter in singlet and shorts. After about a week after 1st vax, always now am cold. Again, unsure if this is due to the vax but feels like it.</p>
28.	Ye		01/08/1983	pending	<p>My husband is only 38 years old and he is very healthy. The vaccine was given on Monday, and the he died on Friday. So many months have passed, and the result of death is still pending. There is no institution to manage this matter. We have three children, now I am raising them alone. The epidemic is so serious, we have been very careful not to be infected. Fortunately, we are lucky enough that no one has contracted the disease. But I never expect to be killed by the vaccine.</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
29.	Michelle	Vic	May 27th, 1963		<p>I finally went to my family GP three weeks later, almost suicidal at this point. She was caring and responsive (Dr Dana Kratz at Elwood family clinic in Victoria, Australia) & sent me immediately to the ER with a medical note (As she said, I'm "the healthiest patient she has ever had, and I'm never sick and I never complain"... so this alarmed her immensely)</p> <p>I was treated in a dismissive way at the ER at the Alfred hospital telling me I probably simply head acid reflux. They sent me home with heavy medication and I went on a very strict acid reflux diet for four weeks. Medication and your diet did not help in anyway. I went back to Dr. Kratz thereafter who took me seriously & immediately referred me quickly to a leading gastroenterologist, called Raphael Luber. She squeezed me in quickly as an "emergency case". We had every test conceivable done, including stomach scans, colonoscopy, cancer checks and going on a strict fod map diet for IBS. etc</p> <p>Nothing worked and I was terribly sick for over nine weeks. I was desperate and then saw Dr Peter Lewis, who also agreed that I had an auto immune response to the vaccine and possibly had auto immune disease thereafter. We did a series of blood tests looking at my vitamin and mineral blood count, finding I was also low in vitamin D: I was prescribed 10,000 iu of vitamin D a day, alongside zinc, coenzymes, and had a B 12 injection and most importantly, also went on a series of eight days with ivermectin. Within five days of taking the ivermectin each day, I started to have some relief.</p> <p>I was fine for about two weeks, and the nausea began to come back, so raced into see Dr. Lewis again, and we went on a heavier dose of ivermectin. Within a few days the nausea went and I have been quite well since. I'm at the two and a half month mark now and I'm back to normal, healthy self, bar an incessant runny nose. But, the nausea has gone. 🙏 I</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>am so thankful.</p> <p>It is to note that I was mistreated on Facebook by a doctor called Dr. Judy Klein from California, who wrote on my FB page when I was in hospital, in which she wrote, my symptoms were merely, “a coincidence or stress or too much alcohol”!</p>
30.					<p>I didn't take the shot,</p> <p>I would just like to get your pdfs and get in contact with you.</p> <p>Thank you for your work!</p> <p>Iris</p>
31.	Hugh	Qld	1965	Inconclusive	I have ended up with a constant headache which I still have after more than a month after the vaccination
32.	Rosemary	Vic	1942	Not reported	<p>Aged care resident nearing end of life. Comorbidity of Ahlzimers. We were ignored by staff when we questioned her need of the vax when she was nearing end of life, she was fragile and there had been no covid in the area at all. It was a direction of the Victorian priemer and we were bullied into consenting by the staff and our concernes were ignored. After her first dose she was found collapsed in her room later the same day. She was put to bed unconscious. Checked by gp. She was found later that evening in her own vomit in bed, unconscious. We were called in for end of life. 3 days later she seemed better but never got out of bed much for the next few weeks. Rapid decline in cognitive function and body function is what I observed over a 6 week period. This was expected with her Ahlzimers and the staff kept reinforcing this. After her second jab she collapsed immediately and was put to bed unconscious with end of life palliative care put into action. It took 7 days of mum gasping for air and her eyelids were fixed open for the last 5 of those days. The staff had expressed that this was abnormal for a dieing person whilst still pushing the agenda that it was</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					not related to the vaccine. Mums death was horrific and absolutly I believe was induced quicker by the vaccine.
33.	Snezana	Vic	1976	Described as "rare"	<p>As I have never had any heart issues before getting the vaccine it is very obvious that I am experiencing adverse reaction to Pfizer vaccine. I have been diagnosed with ventricular ectopics/ bigeminy. 12 weeks after the first dose I am still struggling with breathing, chest tightness, dizziness, heat pounding and generally unwell. I am not able to work which is so stressful and financial struggles are a big problem. I'm willing to show you all my hospital discharge summaries. I have been taken to the hospital 4 times, 2 times by ambulance.</p> <p>Please let me know what else I could do to make sure I have been heard and I get some help with this issues.</p>
34.	Joe	Vic	1977		
35.	Michael	NSW	08/11/1974	Inconclusive	<p>Two days after receiving the first jab of Pfizer I had severe headaches and pains down the lower right-hand side of my back, my doctor organised me to have blood tests and an ultrasound on my back both came back with nothing abnormal, however, I still to date am receiving these pains now I also am having sight issues.</p> <p>I did not receive the second jab as I already have a heart issue and was worried this would affect me worst, I did not talk to my doctor about this as he was really pushing for me to be Jabbed.</p>
36.	Ming		1982	Described as "rare"	
37.	Victor	NSW	1967	Inconclusive	I had first dose Pfizer 13 days ago, day 2 heart palpitations thought I was going to have heart attack spent night in hospital , day 4 pains aches in joints and body rashes day 5 pain in arm pits and still aches in joints day 6 head aches dry mouth feeling weak can't lift arms day 7 feeling better

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					strength returning, to me it seemed my kidneys suffered then liver, day 13 still feeling weak
38.	Debbie	Vic	1967	Inconclusive	<p>Within seconds receiving my Pfizer vaccination, I had a warm rush going through my body from my head to my toes. I was clammy, very nauseous, shaking, chills, my throat closed, extremely light headed and dizzy and severe headache. The receptionist saw I was not well, she asked me to sit and she then took me to the treatment room. My bb was 150/90. A doctor came to check on me, he informed nurse to keep an eye on me and keep me there until my bb was normal. It took about 2 hours. The next day I had vision problems where I found it difficult to see. I thought this was due to the severe headache. After a few days I went to see my doctor, she suggested to go to the Ear and Eye Emergency. They checked my eyes and suggested to get a brain CT scan. At this point I have numbness, tingly, buzzing feeling in my right side of my body. My right leg struggle to stay stable when I had to brake in the car. Referrals were made to the VicSIS but they came back saying not enough details. My doctor is not very supportive, it is as if she is fearful and scared to give me a medical exemption. My doctor is referring me to a Neurologist and an Allergy Specialist for further testing.</p>
39.	Evon	NSW	15.9.1953		<p>I only took the vaccine cause my mum was in aged care had not seen her for 3 months. Received call mum was at end of life and the only way I could see her and hold her hand and be beside her while she took her last breath, I had to have my first vaccine. Mum died 6 days later. I had no choice it was mandated.</p> <p>My freedoms which were given to me by God were taken away by the Government.</p>
40.	Felicity	NSW	1970	Inconclusive	Not long after my vaccination (10mins), I felt extremely tired and wanted to fall asleep, I told my husband I felt tired and my head started to fall forward

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>and I felt sedated, the doctor asked if I was OK and I said I wasn't, I was carried by my husband back into the rooms as my legs had turned to jelly and I could not bare weight on them. I was put on a medical bed, it was then that I realized that I couldn't move any part of my body from my neck down I was also gagging for oxygen and at this stage I was given oxygen through my nose passage. My stomach started to burn and became severely distended my chest was also hurting and burning as well. This went on for over two hours with a nervous doctor assuring me I should be ok, she asked about 5 times if she should call an ambulance, she could not make a decision so in the end I told her to. I could hardly speak and was slurring my words but managed to say I have been paralyzed for two hours I think I need the hospital. An ambulance was calling and I was taken to RNS. All my vitals were checked several times and blood test taken. I was told by the Doctor it had nothing to do with the vaccine and that I had fainted, I told him I didn't and he ignored all the other symptoms and left. I basically had to discharge myself as everybody suddenly disappeared. On the Sunday (3days later) still in shock with fatigue and chest pain, I called the vaccine adverse reactions line which is on the TGA website. The pharmacist on duty told me I had an adverse reaction and that my doctor should lodge the details so I can get an exemption from the next one. Then she said good luck with that as you have to be dead to get it!!! So my doctor did lodge the forms as I emailed her the instructions and a few days later I got this response :-</p> <p>The examination findings are also not consistent with a neurological serious adverse event that might be attributed to the vaccine, and are more consistent with syncope or an Immunisation Stress Related Response (ISRR).</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					I will not be having the second dose.
41.	Natalie		1983	Didn't report	<p>I'm 38. Healthy with no previous issues. I got pfizer on June 2021. Within 2 weeks I notice pain in my back and chest. I had an appointment 2 weeks later and was sent for x-rays.</p> <p>Nothing significant in xray. Pain got worse and unbearable.</p> <p>Then I got a blood clot in my left thumb. It was massive and painful and caused the vein to protrude significantly.</p> <p>That's when I started getting pain up my arm. Blood tests only showed low white blood cells. Now heart beats up to 140-160 bpm and high blood pressure. More tests coming but so far no answers, no treatment and major pains</p>
42.	Nicholas	Qld	1991	Attributed to COVID Inconclusive	
43.	Marie	Vic	1967	Inconclusive	My sister had the AZ a couple of months ago, she has now formed nodules on her lungs that in turn have formed into cancer. Along with a couple of other adverse reactions. Her doctors say it wasn't from the injection. I don't speak to her but I do know her better than her doctors know her.
44.	Colette	NSW	1971		<p>Since the vaccine I have had daily headaches not just a normal headache, like my heart is sitting at the top of my head throbbing & pounding.</p> <p>Whenever I try to go to sleep constant pounding & throbbing & through the night. Very restless throughout the night. During the day headaches taking panadol to ease the pain. I have been very lethargic not wanting to do anything. I have had dizziness & my legs giving way almost collapsing.</p> <p>When my cycle comes around it is very heavy & lots of clots never had this happen before, ever. My vision is worse than before, before vaccine I could</p>

					get away without putting my glasses on to read my phone now is very blurry & need glasses to read.
45.	Heidi	USA	I didn't take the vaccine shot I had Kovic and missed diagnosed and also treated really badly	Recorded as vaccine injury Attributed to COVID	Hi I was treated and Matthias the west hospital in Boynton Beach Florida I wasn't treated very good they didn't give me anything or any choices on what medicine I could take they only wanted to give me one medicine that could cause problems with my kidneys and my lungs but luckily I only had two doses of Remdesivir This is the only thing they would offer me I asked for other medicines they would not give it to me they did give me the zinc vitamin D B12 and vitamin C and a steroid breathing treatments shots for blood whites in my stomach they asked if I could go home several times throughout the week after two days of being in the hospital they kept on telling me that they were going to release me to go home but they kept me a total of five days when they kept on telling me after the third day that they would release me and the doctor would tell me that she was going to discharge me and she never would do it until finally Friday they also treated me not very good in the hospital sometimes they wouldn't even come to me for a While I had to wait for somebody to come in give me water it took them a while to come because they're very short staffed some of them were nice the first night I was in there the lady came in my room and told me I had to put my oxygen on and turn on the light and then walked out I had to get up in the middle of night turn the light off she didn't even turn the light off before she closed the door very rude Nurse when I first got into the room but most of the people are nice to me they wouldn't give me what I asked but they would only offer me what they wanted to give me because they wanted to make money off me and hold me for five days when I only needed to be there for three I never used oxygen hardly at all and I was able to go home and they wouldn't let me.

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
46.	Colleen	NSW	1945	Inconclusive	My mother 75 years of age had her first pfizer at 9.30am 03.09.21 and passed away later the same day at 5.45pm. She had some underlying conditions which I believe should have meant that she should not have taken the pfizer but she was advised and pressured to take it anyway. I strongly believe this is what caused her to pass away, initially the doctor refused to sign the death certificate but after speaking to the police changed his mind, myself and my sister requested an autopsy but our request was refused.
47.	James		1940	Inconclusive	After receiving his shots, my father developed blood clots in his left lower leg. This led to required surgery to remove clotting, replace veins, and the loss of toes on his left foot.
48.	kelly	NSW	1978	Described as "rare" Inconclusive	The first two day and nights after vax I couldn't stop shaking all over and fevers and huge headache. Assumed this was normal. Then about day 4 I woke up and found the left side of my face was entirely numb and didn't feel right. by lunch time my left eye and mouth were droopy and I was struggling to pronounce my words. So I went to hospital. I was taken straight through and had blood tests and scans. Drs assured me it wasn't a clot or stroke but were confident it was Bella palsy . They told me to follow up with gp. Asked if I was anxious about getting vax as stress can cause Bell's palsy. I said no... I didn't want it but was confident with my choice as I had looked at their stats. Have seen my gp twice since and am booked for mri. He said it is more than likely a response to vax but not enough to prevent me from getting second dose. I have since spoken with pharmacist who gave it to me and he said he wouldn't have the second if he was me and I should try different one. Gp said he can't recommend that but was angry I was given AstraZeneca considering my age. I am prepared to not travel interstate for many more months as I don't want the second... I am still feeling effects of first dose :/

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
49.	Delia		1945	Inconclusive	This is my mother and they told her the clotting was bruising and could be from a minor fracture but they couldn't see it on an X-ray. My my mother is fit and healthy and hasn't done anything to her foot. This blood clot is completely following the vaccination and should be reported and dealt with.
50.	Scott	Vic	1991	Inconclusive	Injected arm still aching and throbbing 4 weeks after shot. Constant headaches, very usual for this person. 2x lower vertebrae are damaged for no reason. 51.	Annie	Qld	1971	Described as "rare" Inconclusive	I was given vaccine even though I informed them of being an anaphylactic to medicines and sulphites. They said there is nothing in to that I was allergic to. Within 4 minutes I was in full anaphylaxis then had 1 Epi pen and 2 more IM adrenaline in the next hour. No one reported it or followed up. This was given in the PA hospital hub
52.	Michelle	NSW	1985		I did not want to get the jab as I did not feel that I was a high risk if I got covid19 and I had been reading about the efficacy and also adverse effects from vaccines. It came to the week of double jabbed being allowed to go for picnics. I was feeling very excluded and emotionally drained after weeks in lock down with my two young children. I was not able to work during this time due to being a casual. On the Wednesday it really got to me and I felt like I was the reason that my kids couldn't see their family or friends and that I was holding them back. I had also seen a friend shared that she could not take her newborn to see a specialist without being double jabbed. I felt scared that if something happened to my kids I would not be able to go with them and I would be separated. In my industry we also need to be double jabbed by the 8th Nov and I had been given permanent days for

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>next year which I was so happy and excited about. So in a moment of weakness, the next morning of the 16th, I booked myself in for 10.45am. I didn't tell anyone except one friend because I was not proud of what I was doing. I felt shame. I did not want to do it but felt like I had no other choice - I didn't even tell my partner. At 15min past jab been given I felt a wave of heat in my chest that came and went. I left the hub at 11.20am, drove myself and children straight home. I did not feel right by 11.30am. I made us lunch and whilst eating my jaw began to ache and I felt funny all over. The chest burn sensation returned but, also pressure. I had chills. I toileted frequently with wee and poo. I was so scared. I asked my partner to come home to watch the boys. I felt weak and not able to do much. I went to sleep that night and slept ok. Friday morning after a walk out the backyard to feed the chooks.. the chest pain returned. I called my partner and asked him to come home. He came home at 11am and I went to bed. The discomfort was there all day and even after taking Nurofen and panadol I was unable to get to sleep that night. Lying down seemed to make it worse. The pressure felt like something was sitting on my centre upper chest. I drove myself to ED early Saturday morning around 3am. They did an ECG and told me my heart was ok. He said it could be a body ache or reflux. Spoke with my doctor on the 23rd Sep. He said ED thinks it was reflux. I told him I was still experiencing chest discomfort and I would like further testing as per the TGA website on patients with chest pain after Pfizer. I had another ECG with cardiac bloods on the Friday and an echo and stress test on the Monday. I spoke with doctor again on the 29th Sep and he said all tests were ok and my symptoms were unlikely anything to do with the 'vaccine' and that I should go ahead and get my second. I said to him but it all started half an hour after receiving it! And I had not experienced anything like it before. During that week I had also experienced stabbing</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					pains in my legs, toes and fingers going numb, stabbing pain in abdomen, jaw ache and chest pain again. I still don't feel right today 12th Oct. Chest feels funny when I lay down for sleep. I do not want the second, but at the same time I do not want to loose my job.. but, also at the same time - I do not want to loose my life or have a worse side effect that leaves me unable to work or care for my children. How is this about my health? I was healthy before 16th September!! I am also scared about what my future holds having this substance in my body.
53.	Chantelle	NSW	1985	Described as "rare" Inconclusive	Went via ambulance twice as I couldn't breathe. First time the dr was helpful and said they are seeing this a bit with Pfizer, I get lots of drugs and sent home. After 2 hours I was unable to breathe and had horrible chest pain so husband called ambo again. The second time, the staff were nasty. Dismissive, telling me I have anxiety and need to calm down. I've since seen my gp & she organised an urgently cardiologist review
54.	Louisa	NSW	01/0/1975		I got very sick on the second injection couldn't move for a whole day and my periods were very very heavy not normal
55.	Ara	NSW	2021	Doctor will not report it as a vaccine injury.	21 September 2021 received the first dose which I was feeling a bit tired. Therefore, on the 10 October 2021 I started to swell on the right side of my face. I went to the doctor on 11 October 2021 and diagnosed with bells palsy. I asked if this was a side effect from the Covid Vaccine he had denied it.

Her death was reported as natural with no suspicious connection to the vac. Apart from being a bit frail and underweight, my mother was quite healthy for her age and was still living independently at her home. She had not

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>been admitted to a hospital for at least 30 years prior to this. She was found on the floor of her unit unable to speak properly. She had no trouble before.</p> <p>When I brought this up to the doctors and asked about the possibility of a stroke, they quickly brushed it off saying her platelet count was normal. On her death certificate it was stated she died of acute kidney injury, pneumonia, hypercalcemia and hyperparathyroidism. She had none of these conditions before the jab 5 days earlier.</p> <p>The main doctor in her care admitted to us that he himself refused to take the Astra zenica as he did not believe it was safe. He also admitted that if he had been my mums' doctor, he would not have given it to her. I have this on record. But despite this admission, he still stated in his summary that her death was completely natural.</p> <p>An autopsy was done, however we are told the results could take up to 18 months. As so few autopsies are being done these days, it does not make sense why it should take this long to simply write up a report.</p> <p>My mother was not allowed to eat or drink anything while in hospital, and when I asked if they could give her vitamin C and or D in a drip, I just received blank stares back. It was against hospital policy. One of the young nurses had never even heard of Vitaminc C being given intravenously.</p> <p>The whole experience was like being in a utopian nightmare, with none of the medical staff or doctors taking serious any connection to the vaccine. As a naturopath of 35 years I was absolutely horrified at what I saw. I am currently working on a documentary film about it.</p> <p>I am happy to share this information far and wide, and I am so grateful for this opportunity to have this gross injustice and murder taken seriously. If you are aware of any other databases which is reporting this I would be</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					grateful to be informed. Thanks again for the wonderful service you are providing.
57.	Barry	NSW	1958	Inconclusive	
58.	Sean	NSW	1994	Nurse took personal notes on iPad	As soon as AZ injected into left arm I felt a rush of pins and needles down the arm. It soon concentrated in the hand and fingers with an unusual feeling of pins and needles and numbness. I had to sit in the hall where I had the injection for one and a half hours as the nurse was worried. After several hours, at this point, it is slowly resolving. My problem is this has been mandated at the threat of losing my job as a teacher with the NSW Dept of Education, Australia. Without proof of a second injection I will be dismissed from my job. This is coercion, not choice. I have had this reaction from the first and yet will still be compelled to get a second injection.
59.	Casey	Vic	3682	Inconclusive	I was perfectly healthy and fit before having the vaccination. I'm still waiting for the results of an echocardiogram.
60.	Despina	Vic	1927	Described as "rare"	Doctors said it was probably due to vaccine. Doctor was very rude towards daughter who was with her for being unvaccinated and blamed her. Very unprofessional.
61.	Peter	NSW	1981	Written off as Coincidence	Husband secretly got Pfizer on 31/8 as boss threatened to sack him. Symptoms started with him almost immediately, sounded like a dog with kennel cough, then me, wife, on Friday after intercourse on Thursday. , suffered horrendous uterine cramping, 47yr old post meno 4 years, suffered uterine cramping twice before after being new vaxed exposed. Husband got fever, cough got worse, I got cough and fever. Saturday he started with coughing fits and dizziness, I have bad tooth in my mouth, my mouth started burning then spread to entire left side of my face. It persisted for 10 days even with antibiotics on the 10th it stopped as quick as it started. Husband started suffering headaches, I put him on aspirin,

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					headaches are ongoing, cough comes back worse then before . I only knew husband got it because of the spike protein shedding that I suffered from, confronted him and he confirmed took first shot.
62.	John	NSW	1949	Not acknowledged	72 yo Father - typically healthy and fit. Gets seasonal colds and flus. Had the AZ jab and after about a month fell very ill with pneumonia and was hospitalised in intensive care for over a week. No one correlated it but I knew it was the jab as I had read about adverse reactions like this online. Now he always has sinus problems and his immune system is wrecked.
63.	Diane	Vic	1936	Inconclusive	1st AZ jab in May 2021, 3 weeks later a flu vax. Within 48 hours taken to hospital in ambulance. Severe pain and weakness all over, unable to lift a glass of water, had double vision, dysarthria and cognition issues. in hospital for 6 weeks - couldn't identify the cause but decided it was arthritic pain and settled on a rhizotomy in lumbar spine (doesn not explain many of the symptoms). During this time all symptoms subsided except spinal pain. No longer ambulatory and went from independent living to an aged care facility. 2nd AZ Jab mid July. 1st week of October sent to hospital with multiple pulmonary embolisms. We don't know when they started but had laboured breathing over the last few weeks. Now on blood thinners. Still in hospital. Denial by health staff (and remainder of family who are non-medical) that this can be connected with the AZ jab.
64.	Sok	NSW	1999		My daughter was so ill, she lives alone, she had to be alone with no help, she also lost work and pay. Who helps or cares about her, even I cannot help her, what sort of world are we becoming? Where basic care is refused because of this illness.
65.	Vanessa	NSW	1971	Inconclusive	I woke up with one eye closed & severely swollen. I was concerned that one of my pupils was bigger than the other. I went to my Dr, she denied that this reaction was attributed to vaccine first dose one week prior. I have a history of being sensitive to medications & have had allergic reactions

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					prior to this. But i have been able to pin point the cause. This came out of no where. Its incredible how my Dr didn't want to even explore the idea that this was an adverse reaction to vaccine. Its the ONLY thing iv done differently within the past week. My Dr put it down to a stress response. I am afraid to go public about any dissenting opinion on the subject of vaccines , i'm terrified of getting the second dose but if i refuse i will lose my job. I just want to be able to work to survive. If i cant work how will i survive?
66.	Christy		1967	Did not report as I am aware	Fully vaccinated and 6 weeks after, I had been diagnosed with Covid-19 full symptoms and sick for 3 weeks. Sick with cold virus, flu virus for 3 months or possibly two more rounds of COVID but had negative tests. My antibody test is only 9.44. My husband did not get vaccinated, he has been well no sickness since his diagnosis in January, his antibodies are 20. I am terrified to get flu vaccine.
67.	Trevor	NT	1955	Inconclusive	My Dad had the heart attack 4 days after he had his 2nd jab. 2 weeks later they put him through a procedure as they said his heart is weak and they needed to test it, cause it couldn't be related to the jab. They tried to force his heart to go into an attack and it wouldn't. They came to the conclusion he has a very strong heart. But they still didn't count it as being related to the jab. They don't seem to want to make that connection when it is jab related, but if it was an illness, they will relate anything to the covid virus... figure that one out. So this has not been registered as an injury from the jab by the docs or hospital...
68.	Marcus	Vic	1990	Described as "rare"	I do believe there will be alot more long term effects of this "vaccine" in years to come
69.	Lauren	NSW	1983	Inconclusive	
70.	Scoot	NSW	1977	No response	He got the first vaccine and bells Oalsy set in a few days later. Nobody wanted to know. We spoke to one of the practice nurses via phone

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					conference and she told us to report it to the TGA which there has been no reply. It took weeks for it to improve. In that time and even nlw he continues to have dizzy like spells and often complains of feeling fuzzy. He also has severe pain in the arm. The site of the injection and whole arm.
71.	Kristen	Qld	1967		<p>Following first vax my hot flushes ceased and menstruation recommenced two weeks later after 3-4 months absence. Two days after vax I said to my husband my hot flushes have completely gone I net mu period starts in two weeks. Very heavy bleeding and continued to reoccur monthly. Painful swollen breasts new to me occurred with cycle sudden weight gain. Reported sharp headaches dozziness and episodes of sharp cheat pain to Dr and stated I think its all from the vaccine. Swollen wngorged painful breast with a feeling of let down continuous each month with 5 days relief when menstrating. Post second vax dizziness worsened, severe episode of vertigo nausea room spinning day 7. Mental confusion and incapacitated at work for the day. Monthly excessive bleeding on cycle with visit to caloundra accident injury clinic with excessive menorrhagia anxiety (not wxperienced before) nausea [two weeks ago September 25?] and faintness. Given medication to stop bleeding. Good recovery with treatment. Following up with Doctor due to low haemaglobin and requesting prolactin blood test for swollen painful breasts. Its been 15 years sincl Ive experienced painful swollen breasts and this is the worst ever. I am completely convinced my</p> <p>Hormonal reaction/ imbalance has been stimulated by the vaccine. Whether oestrogen dominance or MTHFR positive individual have these side wffects more Im not sure. Perhaps my poor methylation of chemicals os the reason I am reaction who knows but I am definately experiencing more severe side</p> <p>Effects</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
72.	Marjory	Vic	1937	None	It's very much believed due to vaccine time frame the death was caused by the said vaccine, went in due to old leg issue returning, turns out leg became infected for no apparent reason (had been fine for months) then she started fever and cold sweats, clots were found, heart clot was found and pericarditis was identified, pericarditis burst then she died
73.		Qld	1967	Have not yet received death certificate	My sister had a traumatic brain injury over 10 years ago. She was on multiple medications. She had many comorbidities. She died alone at home in her bed. She was found by her support worker. Initially they said there was going to be a autopsy which we were told was routine procedure. However on the third day we were notified that cause of death was heart attack and no autopsy was required.
74.	Michelle	NSW	1980		30mins after my first shot of Pfizer, I started getting muscle twitches over my whole body they continued frequently for a week. The nights were the worse as it would be more prominent laying down. I was really frightened and I know it was the vaccine. I saw a doctor a week later and got told not related. I then went to another doctor who has listened. I reported the adverse reaction myself. I got stepped down from my government job last Friday because I have only had one jab. I went back to the doc yesterday with a medical contraindiaction form. The doc has referred me to a specialist. All in all I wish not to receive second dose of Pfizer. It really scares me and to not have a choice is absolutely heart breaking to me. I want to keep my job but at the same taken I may have to walk away because I'm not double jabbed. My twitches are only occurring at night and sometimes during the day, they are losing there intensity and frequency.
75.	Cara	Vic	1984	Allergic reaction	I've been told I need to have my second dose even when I've had an allergic reaction (rash, itch, high blood pressure)
76.	Amira	Qld	1998	Inconclusive	

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
77.	Patrick	NSW	1943		My father died 5 days after his second AZ injection. We are waiting on the autopsy report. He was 78 and had pre existing heart issues but was otherwise healthy.
78.	Amanda	Vic	1966		I'm 55 and not had a period for just under 12 months. Since my first injection my breasts have been extremely painful, swollen and at time hot and itchy and my nipples very tender. It reminds me of when I had my children and my milk came in. They have been like this for approximately three weeks now and during that time I have had slight bloody discharge like I'm about to get a period on and off.
79.	James E	NSW	1961	Attributed to COVID	Constant pain t injection site and extreme tiredness
80.	Dick	Qld	1954	Has COPD	Was bullied to have 1st jab, which caused double pneumonia, because of his COPD, by his specialist. When he mentioned he was sure it was caused by the jab he was transferred to a private marta hospital for treatment. Then was coerced again by his specialist to have 2nd jab and has gone downhill since. His wife was told he may only have weeks maybe days left.
81.	Stephanie	WA	1987	Silent migraine	<p>this is only the start of my documenting my journey so that I can remember it.</p> <p>Moderna Vaccination 4th October, 2021 at 1500hrs. Location: Armadale chemist warehouse pharmacy.</p> <p>I was forced and coerced into receiving my Moderna vax (ModVax) by HPH and stood down by AD on Saturday 2nd October I was sent home at 2400hrs mid shift due to been unvaccinated and told that I could not return until I had been vaccinated. Been a single mother of 2 I felt like I had no choice as they held my livelihood over my head.</p> <p>I am an Advanced skills enrolled nurse where I have been working at HPH since August 2nd, 2010 where I completed my graduate program. I work casually now since 2019, I am currently studying my registered nursing</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>degree full time at university. I also work for C***** in the mining industry as a Medical Emergency Services Officer casually.</p> <p>Prior to the ModVax I was a healthy fit 34 years old female, with nil sig medical history or comorbidities.</p> <p>Throughout this below, I have experienced a loss of appetite, and trouble sleeping, I am also finding that simple activities during the day are fatiguing me, requiring me to rest.</p> <p>Monday 4th October: I attended the pharmacy with a weight on my chest knowing I did not want this vaccination, I was put into a room by the pharmacist with a kidney dish and a syringe, there was no accompanying vial, no sticker, no sort of identification or paperwork, I questioned what I was receiving and I should have requested to see the vial, she went to say that AZ was white and Moderna was milky white, I do not know the dose I received. After receiving the ModVax, I felt a thermal cold burning sensation at the injection site and into my left arm around the site, this remained for a few hours. Monday evening at 2200hrs I felt across my chest a severely profound thermal cold burning feeling which was also filled with an adrenaline and nervous/anxious feeling, I had not been anxious prior to this and I believe it was my body causing these feelings, not my head. This was a all consuming feeling and I tried many distractions and activities to calm my mind and stop the feelings because at the time I hadn't realized it was the beginning of my reaction. I did not sleep Monday night.</p> <p>Tuesday 5th October: I went up to work for FMG for the day and will fly home Wednesday AM. I have been having the same chest feeling but not to such a severe degree. At 0130 I finally managed to get 4-5 hours sleep at this point I had been awake for 40 hours straight without sleep.</p> <p>Wednesday 6th October: after watching a movie with my children, I put</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>them to bed and then returned to the couch snuggled under the blankets and went to watch more TV. As I was sitting there watching tv I felt the same thermal cold burning feeling blossom across my upper left side of my chest, this feeling I could literally feel it spreading over my left side of my chest to my left arm where it spread down my left arm and then went up the left side of my neck and stretched to the left side of my back, shoulder where it stretched across to the right side of my back. I could feel it and the progression it made I can point out the line between altered sensation of affected areas vs not affected. Whilst this happened, I had the thermal chest cold burning sensation It took me a long time to go to sleep that night.</p> <p>Thursday 7th October: I went for a walk with my sister and children at tomato lake, toward the beginning of the walk I experienced the same thermal cold burning feeling spread down my leg, proximal to distal. It had a strong cold feeling inside my leg and when we sat at the café I kept my left half the body in to tun a bit to try to warm these areas. A few hours later at 1318hrs I was driving home and sitting at the traffic lights where I could feel my chin start with a numb feeling and this started to spread up my face kept to the left side only, my lips started to prickly and tingle and then my ear went funny, it feels like it has lost a degree of hearing and I couldn't pop the ear, I then I could feel in my throat the left side was different to swallow, kind of like slower, my tongue felt funny and the corner of my lip felt numb and weird. This spread up my face, I started to get a solid pain in my head located in my head near the ear and it wasn't a spreading pain like a headache that was blurry on the edges and spread it was, 1 spot as if someone pointed a torch in one area, then it stopped and moved the base of my left skull, same pain experienced, where it then moved into the center of my left side of face and to my forehead, these</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>were sudden sharp pains, they didn't stay in the previous spot as they moved. The whole left side of my face has a numbness to it, I also have noticed that I have a slight left lip droop, and my eye doesn't open fully like the other.</p> <p>I attended the Armadale Emergency Department 1410hrs, I was seen first by Dr Shaun (or Sean), I felt it easier to talk to him since he had said he had also been forced to have his Vaccination for covid-19 to keep his job. He listened to me try to explain my symptoms which has been difficult, I hadn't realized at the time I had a left lip droop – or I would have pointed that out. He put in a IVC and took some bloods, another female doctor came who was pregnant, she came, and I explained it all over again, she tested my reflexes, she said my reflexes weren't the best, the tested muscle strength etc. she came back and told me that my blood results were fine, the platelets were fine, she said they didn't suspect stroke (I had mentioned Bells Palsy to Dr Shaun) or a PE. She said that it will be a vax reaction but not a serious one and didn't see why I couldn't have my second vax, she also said that they've had lots of people coming through with reactions and side effects due to the vax, they just aren't serious, she says. She said it was possible I was suffering from a silent migraine, I have never had a migraine before, I had no symptoms the same as a silent migraine except for the neurological abnormalities.</p> <p>As I have been sitting Thursday night, I have all the left sided altered sensations, my left side of my body feels like it has a layer of numbness over it compared to the right side. I also have the thermal cold burning feeling all over the left side and this is also on the rear of my right thigh and my right arm, to explain this feeling it is like someone has rubbed metsal cream under my skin and into my body and then also spread it over my skin, I have altered temperature disturbances over my left arm specifically,</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>I cant get a temperature right, any cool breeze and it makes me get goosebumps and feel extremely cold. I also have been feeling the chest thermal burn, deep in and over my chest that accompanies by the adrenaline anxious feeling, I wasn't not stressed at this time, it just flares up stays for a while then slowly simmers down to having it sitting there gently always felt. I'm worried that this burning feeling since it almost encases my upper chest will be affecting my heart.</p> <p>With regarding to shower temperature, prior to the ModVax I loved really hot showers, now I am struggling to have too much heat predominantly in my left arm and hand and side, I just cant tolerate the water temperature and it gives off an extreme burning feeling, it is 2348hrs.</p> <p>Friday 8th October: I have realized today that my arms are getting a weird feelings, hard to explain but if you get a nervous or excited feeling about something and your arms have the jittery nervousness, I have been experiencing this, I have noticed that if I do think about it or start having another episode of the burning sensation or different new feelings this will set of the full blown response in my chest and this amplifies the nervous response, this is also happening when there isn't anything to cause it, if I am warm and comfortable it comes on more and will amplify, otherwise it just sits there with the thermal burn.</p> <p>1230hrs I am out with mum at the shops for distraction had lunch, got a lemon lime and bitters, had a drink -has a gross taste, I start to experiment with the tastes, I have now discovered that my left side of my tongue has altered sensation and taste. The left side of my tongue has a bitter metallic taste while the right has normal taste, I put a piece of ice on my tongue and it has a complete dulled recognition to the right side, as does rubbing lemon on it, the sourness barely is recognized. I barely ate Thursday, and this was a struggle to eat this little burger.</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>1418hrs walking around the shops my left foot goes numb from the top and then spread to the bottom, I then had a prickling tingling sensation move up and down my lower leg until it settled into my ankle the front crease/bend where It stays like a cold thermal burn inside, after about 20 minutes of this going on my chest has the full blown chest pressure with the cold thermal burning with the fluttering across my chest, when this happens I cannot focus, cannot do any normal duties, when this happens I cant bare to have anyone touching my arm as its prickling too and altered sensations and getting the goosebumps due to the thermal cold though I am not actually cold in the shop. I have found the symptoms that I receive can change very quickly and I can feel the change in my tissues as it spreads.</p> <p>At 1939hrs I have started getting throbbing arthritic type bone pain that started in my hips bilaterally and has moved slowly down the bone until it was in my knees as well this was felt to a more painful degree in my right side and then I had a burning strong stabbing pain in my left leg, like it was in the muscles which stayed there for at least 30 minutes. At 1944hrs I tried my daughters Coca-Cola chuppachup, touching to the right side of my tongue, the sugar spreads across my tongue activating those receptors to the sweetness. The left side is very dulled and can only taste a bit of sugary taste.</p> <p>In the shower tonight I poked my tongue out under the spray, high pressure shower, as a single stream of water hits my left tongue I can hold it there for a bit without issue, but when I do it to the right side instantly, I must remove it and itch it and feels like I need to scratch it.</p> <p>9th October: I have started to get what feels like a chesty cold, my chest is feeling congested, and my throat is sore, my left leg is progressively getting worse with the strong urning sensation in it, and its only continuing to grow</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>stronger. Everything continues to be the same, chest burn, left leg burn, left arm burns sporadically, left sided numbness, and can never tell if I am hot or cold, but if I keep myself cooler then the chest burns simmers.</p> <p>10th October: I woke up today and my arms are feeling a type of twitchy tremor, to explain is like a nervous or excited jumpy twitch that you could get when nervous or excited, my hands both have a distinct tremor in them, I can feel a tremor in my arms that isn't seen from the outside, like my muscles are twitchy constantly. My hands are jumpy and have a jerky movement when doing small things like typing on my mobile, I am making more mistakes when typing. It is incredibly hard to find the words. My arms and legs have a felt weakness in them. My head has begun to feel not quite right, like something is slightly off but I cannot pinpoint it. I still experience the left sided numbness and burning in the arm, leg, chest and back. I went to the shops today, I carried a semi weighted bag, nothing hugely heavy, and have been experiencing quite a bit of back pain since, I've tried stretches to help. My body feels a bit stiff, usually I am very flexible.</p> <p>2200hrs- I can feel my legs tremor in bed I'm simply laying here, and they are tremoring I can feel it on the other leg and can feel it inside the leg, my arms and hands also have a distinct tremor.</p> <p>11th October: I continue to feel the weakness and twitchy feelings in my arms and legs. I have seen the naturpoath today who has said that the sharp pains in my head at time of the reaction were brain bleeds, I am also experiencing head fog and have trouble keeping focus and train of thought with conversation and forget whet im doing as I'm doing it. More has come from this appointment.</p> <p>I saw a gp today regarding follow up with a neurologist and a exemption for vax 2 as I need to work. They told me I need to see a immunologist and gave me a copy of the Emergency departments discharge letter... majority</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>of the information on the discharge letter is untrue and not in accordance to what I told them, they have changed it all around to suit their own narrative. The lady doc told me I have poor knee reflex.. yet on the discharge it said reflexes NAD (No abnormalities detected) my obs were normal limits but my heart rate was tachycardia at 103. They worked down that I had a left headache with all over migratory head pain... none of which is what I told them. I'm disappointed they've lied so blatantly. They said diagnosis was adverse toxic reaction +/- but they told me it will be a vax reaction but it's not serious and that they get people with vax reaction come though all the time but not serious. She also told me to have my second vax. She then tried to tell me it could be migratory in the form of a silent migraine but I only had one of the symptoms which was the abnormalities in sensation. They only did some bloods, they did not do a CT of my head or any other imaging or even a ECG.</p> <p>I have copies of my triage forms from ED, a stand down letter from my work.</p>
82.	S.E	Qld	1991		First time told it was coincidence. She had tired eyes and c Vaccine just coincidentally made it worse. Didn't bother second time.
83.	Stephanie	NSW	1992	Recorded as vaccine injury Attributed to COVID	After 1st dose, temperature 39.2 degrees, lethargic, headaches. Vaccine area was inflamed, red and sore. The redness spread every day until the around was the size of 15cm x 12cm. Doctor suggested taking antihistamine and using Diprosone Ointment. Took a week before it subsided.
84.	Steve	NSW	1980		Si Fueris Romanae Romano Vivoto More
85.	Cassie	NSW	1982		<p>. I am allergic to the ingredients as I know I would be despite my dr knowing I have anaphylaxis with these vaccines they have peg and polysorbate 80 - both makes me really sick .</p> <p>I had an asthma attack straight after , couldn't breathe .</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					soon as I had the shot I felt really sick ,I started shaking . Dizzy , nauseous, vertigo for 2 days . Got home and just couldn't move , my heart rate doubled , I thought I was going to vomit . I was in and out of it the next day, was hard to list my head , I just was so sick . Had multiple asthma attacks , i felt like I was being suffocated , someone was grabbing my chest and squeezing .
86.	Samuel		1989	Described as "rare" Inconclusive	I suffered a Urinary tract infection shortly after each dose of the Pfizer vaccine. I have never had a UTI before in my life. I did a full course of antibiotics after the first jab and infection. After the second injection I suffered a more painful and serious UTI and was unable to urinate without blood coming from the penis and extremely painful. I was admitted to hospital and spent 2 full days barely able to walk or move without discomfort. I was given a heavy dose of strong antibiotics administered via intravenous amd painkillers. I visited multiple doctors and a urologist specialist to find the reason for the infections. Nothing could be identified except the vaccine. I did alot of scans and tests including an invasive cystoscopy but no issues could be identified. I am sure this was the vaccine as I have never experienced anything similar in my lifetime and despite this being rare it has occurred to others.
87.	Rosi	NSW	1975	Still under investigation by specialists	I got the vaccine unaware of how frequent side effects were. I have had bad reactions to medication in the past causing me some life-threatening issues, but I never thought a vaccine would cause me such issues and for so long. It's been over 7 weeks since being vaccinated and my pain is 24/7 in varying degrees. I feel scared and worried about what is wrong with me. My GP has recommended I get a gastroscopy as the ultrasounds I had don't have the capacity to see what is wrong with my stomach. I can't sleep on my side, it is painful to wear a bra because it puts pressure on my stomach,

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					I have no stamina to do physical activity. I have been diagnosed with severe anxiety and depression too.
88.	Isabella	NSW	1996	"Chest tightness" (discharge)	<p>On the tuesday, I had the vaccine 1st dose Pfizer. This was because of extreme pressure from family and requirement for new job. I was very hesitant to get it because I have asthma and high inflammation in body and other medical conditions. My gp said it was completely safe and she asked me in a confused and angry way "why haven't you had the vaccine?! I urge you to get it". She knows my medical history and still urged me to get it.</p> <p>On the tuesday, day of the vaccine I had a panic attack before it was injected and the lady asked if I wanted to speak to a doctor beforehand and I said yes. The doctor was talking about all the "hype" around the vaccine and a lot of people my age and misinformation. He said it's completely safe and it has been tested all around the world and started talking about his family and his experience and they're all fine.. I said I was worried because it is a trial and I told him my medical history and also there's no long term data on side effects and I asked if it is 100% safe and he couldn't answer yes to that. He said with anything there could be side effects and that it is FDA approved.</p> <p>He said youll be fine.</p> <p>I went ahead and got it done and within a minute or two I fainted. Within the hour and a few hours my vision was a little blurry and I was spacey. From that day onwards I felt chest tightness and near the heart, random shooting pains in my body in random areas and I was extremely weak. My teeth and jaw on the left side (left arm was jabbed) was extremely painful and my face and body extremely inflamed for a few days (still is). The tightness and pain in my chest went to my heart as well and rib cages. Lots</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>of shooting pains and troubles breathing. The pain and tightness in my chest and heart was so bad that I went to the doctors 3 or 4 days after vaccine. I told her what was happening and she kept saying I'm just anxious. That's just your anxiety..</p> <p>I told her that I actually had been remaining calm since the day of the vaccine to focus on just getting better and healing. She kept saying that the pain in my breasts is normal.. And "what's the worse that can happen.. You have breast cancer or a cyst?! That's not from the vaccine.. And that you only can have side effects from the vaccine 3 days after it" and "it's normal to have these side effects.. My daughter had pain in her breasts and she's fine now". She kept gaslighting me and saying I'm just anxious.</p> <p>She said to wait a month before getting a scan anyway.</p> <p>The pain and chest tightness and pains in my heart got worse and worse. I kept sweating and getting hot and cold flushes. Pain and aches in the body especially around my chest and heart and ribcages. Also struggling to breathe and very short breaths. Random heart palpitations and numbness in the arms and legs and feet(which is still happening a week after vax)</p> <p>Two days after the doctor appointment, is when the adverse reaction happened (9th October).</p> <p>In the morning and day before I had diarrhoea and was throwing up so much thick mucus.</p> <p>Then that night, I was sitting with my boyfriend after dinner relaxed and I knew I wasn't feeling any well that whole day and the whole week and my chest was tightening.</p> <p>All of a sudden my airways completely closed and I couldn't breathe at all. It felt like an anaphylaxis.</p> <p>I was in shock because I couldn't breathe. its as if someone had blocked my</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>airway and he watched me and was panicking and I started choking non stop. No air was coming through. My chest was so tight and my heart was hurting and I was choking and coughing non stop for at least 10 minutes straight. I had no oxygen and couldn't open or focus my eyes for at least 15 minutes. My boyfriend was trying to hard to keep my conscious and breathing. I had never experienced this before in my life and have never been so scared. He was going to call the ambulance but was too busy trying to keep my upright and conscious and breathing. After about 15 minutes of that I was finally in bed laying down but with the worst heart pains and chest pains I've ever experienced. It was so hard to breathe. My arms went numb and I couldn't feel my left arm. I had random twitches in my left arm and random muscle spasms. I didn't feel right at all so I went to the emergency at Concord Hospital.</p> <p>After waiting an hour outside on my own(none of my family were allowed in with me) for them to give me a covid test and test results (they said I had to) they said I was negative and I had to wait even more to get inside.</p> <p>When I was finally in a room, they did blood tests and other tests. I told them if they could use my right arm because my left arm was very sore from the vacine and they went ahead and put the needle through my left arm and it was SO painful. She was rough and didn't care that it was in pain and she said it's normal for a little sting. It was in so much pain I couldn't bend it. It was purple and inflamed. After the tests and a couple of hours, the nurse told me herself that "you've had a reaction to the Pfizer vaccine. It's called costochronditis. It is one of the side effects" she spelt it out for me and explained it's a painful inflammation of the rib cages and chest and heart.</p> <p>They DID NOT write this in the hospital discharge summary. They wrote shortness of breath.</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>Then a male doctor or nurse did an ultra sound of my chest and he said that I have none of the "bad stuff and no fluid around the heart" I told him I was scared to get the second jab because of what I've been experiencing, the pain in the heart and tonight when I had zero oxygen and was choking and couldn't breathe and he said "this is so common and "when I had the vacine, I fainted in my car and passed out again when I got home... And on my second jab I only had a sore arm."</p> <p>He was the second doctor to just talk about their experience. IAll they said to me in regards to fixing the pain in the heart and chest pains was to take panadol.</p> <p>It's now a week post vaccine and my heart pains and chest pains have NOT gotten better. I've been close to fainting several times. I start choking if I laugh or even eat food. My heart palpitates like crazy if I'm moving and the pain and chest tightness is still there. I can barely breathe properly and comfortably.</p>
89.	Desiree	NSW	1982	Inconclusive	<p>Within 15 mins of shot neck stiffness and across shoulder pain and hands tingling occurred. Nurse said this was normal for some and allowed me to leave. Tingling subsided. Joint pain did not.</p> <p>Within 30 mins a weakness felt in body and a pain down leftside of back and felt weaker, tired and just a bit tired the rest of day.</p> <p>5 hours post vax: arm throbbed at injection site.</p> <p>8 hours post Vax: sharp pain in nose and deep between eyes. Burning skin on chest between breasts requiring ice pack. Normal cream not helping.</p> <p>Day 2: unable to move or touch arm from shoulder down to elbow. Feels hot. Feeling body aches in wrist, elbows shoulder and neck.</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>nose hurts to touch, like it's been hit with a hammer. Paracetamol taken. Skin condition spreading in pain with burning and itchy. Looks like cellulitis. Feels like it's scalded.</p> <p>Day 3: Nose still feels different with a deep tenderness. It's more stuffy that I can ever recall that's not clearing with nasal rinse.</p> <p>Mild headache on right right of head.</p> <p>Mild heartburn experienced throughout day even when no food taken.</p> <p>Day 4: Muscle ache continues down whole back. Feeling light-headed and slight headach.</p> <p>Had episode at shops where I almost passed out. Had the weirdest pain in middle of my chest and a hot flush ran through my body. I felt like vomiting. I took big deep breathes and it passed. Hearts felt like it's running faster since with constant heartburn feeling in chest.</p> <p>Nose continues to deteriorate in pain and stuffiness. At night I could smell burning in nose and my eyes watered as if I was walking through a fog of smoke. Used nasonex with little relief.</p> <p>Blurred vision and piercing pain between eyes. Went to bed much earlier than normal. Woke during night to heart racing drank lots of water.</p> <p>Day 5: neck stiffness feeling generally crazy. Head feels full can't breathe from nose. Can't handle any more sinus issues and worried about heartburn pain in my chest. Went to see doctor. Referred to A& E for ECG, bloods, chest xray.</p> <p>Day 6: All test clear. Arranged for ct of brain and sinus. Back, neck and shoulder pain increasing feels like im lying on a concrete floor. Shortness of breathe experienced during light duties in laundry having shower, walking</p>
90.	Stevece	NSW	6 10 79		<p>Took the vaccine next couple days was unwell side pains on the left side .blood pressure 180 over 110</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
91.	Glen R	NSW	19/09/1991	Inconclusive	This is my son he is a healthy 30 yr old without any underlying health issues... except minor allergy to bees which he told the person who administered the shot, first shot no problem but three days after his second he was woken by severe chest pains in the early hours, he drove himself to emergency and they ran tests and said there was abnormalities, he was transferred by ambulance to another hospital and put in the cardiac ward where they mean tests for suspected heart attack... everything came back normal except that he has swelling of the heart... after two days he was released with a lot of medication... and won't know the complete damage to his heart for four weeks when he has to go see a specialist
92.	Paul	Qld	1935	Inconclusive	My grandfather received his 2nd AstraZeneca jab at the end of august. He has been declining since. Slurred speech, issues with memory, no balance and has fallen into walls ending up in multiple hospitalisation, extreme trouble breathing, low bp, AF, fluid around lungs, enlarged heart. My grandfather is currently in Rockhampton hospital deteriorating rapidly and not expected to live more than a few days. He was fine before these jabs. GP and hospital has both said his reaction and decline is not related to jab. I 100% disagree.
93.	Todd	Vic	1979		Todd experienced chest pain after first dose but did not visit a doctor. The chest pain increased significantly after second dose. Todd stated he would visit a doctor but it is unknown if he did or not. On 18th Aug he was at home in Melbourne running on a treadmill. His partner walked into room to find him slumped beside treadmill on floor. She called ambulance and started resus. Ambulance took 40min to arrive

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					<p>and Todd was pronounced dead at the scene.</p> <p>Case was taken by Vic Coroners Court and a full body ct scan showed no existing underlying issues.</p> <p>It is not known if this case was reported to TGA by Coroner.</p> <p>Todd's body was flown home to NZ.</p> <p>Plz google "Louie Knuxx dead vaccine" there are articles covering this.</p> <p>Todd was a hip hop artist, his stage name was Louie Knuxx</p>
94.	Rachel	NSW	1969	Inconclusive	<p>Day of second vaccine my mum was feeling extremely unwell. She said the opposite arm to vax was so sore that she couldn't move it and we found lumps under her arm and on her buttocks. The next day she was hallucinating and had a migraine. The next few days she was lethargic and just didn't feel right. Almost 3 weeks later her face and hands swelled up and she broke out in hives and rashes all over her body. We were really worried as She's never been allergic to anything and the swelling and hives just got worse. the doctors said it was inconclusive and have given her an epi pen to now carry around with her.</p> <p>FYI nothing had changed in her diet</p> <p>Or daily habits</p>
95.	Despina	Qld	1978		<p>I was in perfect health prior to the vaccine.</p> <p>After the vaccine I had flu like symptoms, headaches and very fatigued. My symptoms have subsided a little but 3 days later I'm still fatigued and cannot attend work.</p>
96.	Karla	WA	1963		<p>A rash appeared across my friends face, mainly the eye area. Doctor informed her that it was most likely a reaction to the vaccine</p>
97.	Ilias L	NSW	1980	Recorded as vaccine injury	<p>Reported above is my husband's experience, but I also want to add that I (unvaxxed) experienced symptoms when my husband got vaxxed. I experienced extreme fatigue for over a week, my period came early and with strong cramping that I haven't experienced in 15 years. My pre-teen</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					daughter also experienced spotting that same month even though she hasn't started menstruating. I feel there is not enough mentioned about shedding of the vaccine and I think it should be investigated further.
98.	Glenda	WA	1956		My friend started having horrific nose bleeds and a lump the size of an avocado appeared in her neck. I urged her to go to the doctors
99.	Callam	WA	1971		The person came down with a very strange illness, he was unwell for two weeks as did not attend work, he flew out of site early. He did not pass the illness on to any other workers. He is now back at work and still did not look well, was also a very strange colour.
100	John	Vic	1975	Inconclusive	I started to observe ringing in my ear out of nowhere 7-10 days after pfizer vaccine. This ringing became gradually louder and in 4 weeks it was so loud that it started to affect my sleep and mental health. I then approached my GP, who forwarded me to an ENT specialist and I was diagnosed with tinnitus the specialist stated that there is not enough data to state that the vaccine is the cause of tinnitus. My GP contacted his colleagues in UK and came to conclusion that the vaccine if not the cause, is definitely the trigger of my tinnitus and advised not to take the vaccine. Work has stopped me from work and won't extend my contract. At this stage, my GP has raised a report to VICIS waiting for reply. Works safe rejected my case stating that I have not been injured at work place. Waiting to see the ENT appointed by work safe in November.
101	Genevieve	WA	1980	Recorded as vaccine injury Described as "rare"	24 hours after 1st Pfizer dose experienced extreme nausea and abdominal pain, saw my GP who prescribed ondansetron; made another trip to GP a few days later as still felt sick. I reported the reaction online though the official means
102	Rikki	Vic	1980	Inconclusive	Chest pain, sporadic. Couldn't move arm for days. Fatigue.

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					2nd vaccine. Couldn't move arm for days. Large raised rash on site of injection. Still a big lump. Extremely sore armpit. Lumps forming behind ears. Extremely itchy arm and face constantly. Woke with chest pain 2nd after. Vomiting 2nd day after. Sore throat. Starting to improve day 6 after 2nd.
103	Gabriel		26/11/1993	Micturition syncope	I had my second dose at 11 am on the 6/10 and after it I felt normal. During the night at 5 am I woke up and went to urinate and I fainted. After approximately 7 minutes I regained consciousness and I called my girlfriend for help. At the hospital were in conclusive reporting the cause of the fainting as micturition syncope.To be honest I did some research and I think that I developed myocarditis because I have all the symptoms that correspond to it.
104	scott	Vic	batchn o: fg3712	none they did wont nothing to do with it.	got the jab, then had to sit for a 15 min period to see if theys any issues. got to the 5 min mark, then i got the shakes, fever / sweating dry mouth needed a drink feeling, dissy ness lack of oxygen. got up from my seat to go to the front desk, and fell Unconscious/passed out to the ground. when i woke i had a blood pressure of 80/ something cant remember. then got taken to out-patience, for 1 hour to recover, had low blood pressure then spiked to high then it settled at normal levels.
105	Dave	Qld	1959	Described as "rare" Inconclusive	still having problems 7 months later, seeing a neurologist, eye doctor, medical doctor my headache and vertigo was so bad I thought I was going to die. refused to have the second jab I now have a retnar and macular detachment, wither that was cause by the jab I don't know. About to loose my job at the end of October
106	Alana	NSW	21/03/1997	Inconclusive	I was personally peer pressure in my work place as I was on probation and they are desperate for assistance with work and continuously reminded me

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					of the pressure they will be under if I don't take the vaccine and in addition none of them had adverse effects nor where at the same age . I told my work place both my parents had adverse reactions and I have fertility/user active thyroid issues which was lighting considered . I was not confident in the agenda of the vaccine nor the blackmail of the government telling me I was not going to have any freedom otherwise . I already suffer from anxiety/ depression and just moved out of home prior to lockdown and had a major stress on my income with no job security
107	Samual	Vic	1999	Described as "rare" Inconclusive	All was fine on first dose. Second dose i was fine but noticed increased difficulty breathing over the duration of about a month. Roughly 1 month after 2nd injection i had a really bad reaction after work were i couldn't breath and genuinely felt like i was having a heart attack. Landed in hospital spent roughly 2 weeks there after being diagnosed with an enlarged heart or myrocarditis. Im not on medication daily for my heart problems and go back to hospital every week for checkups. Still recovering to this date and still on medication. This was written on 11/10/2021 3 months after i was admitted to hospital.
108	Eugene	Vic	1951		At doctors consultation when asked if he should get it. Doctor said. Put it this way. If you don't get vaccinated and catch corona your dead. Now a few weeks after 2nd dose we are noticing. He is mixing up recent events. Unable to remember things that happened long ago. Also gets confused when asked some questions
109	E L B	Vic	1945		Person reporting on is my mother. 78 yr old. vaxxinated out of fear of loneliness and isolation caused by Victoria's apartheid economy being imposed on the state. Had covax jab . developed irritation in bronchial

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					tubes causing sever coughing (barking type sound) . Over came this then a skin cancer popped up over night (approx a week later) where it had to be cut out leaving a hole the size of a 50 cent piece. Skin cancer is a pre-existing problem that mum get's periodical checking for and lump removal for. Mum checked with her docter first to see if she was fine to get the jab and he said yet. This is despite mum having underlying immune disease that affects her liver , thyroid and bronchials and intestines.
110	Ally	NSW	2000	Described as "rare" Inconclusive	Attended hospital with chest pain and shortness of breath, spent hours in hospital and was given blood thinner medication, sent home
111	ELENA	NSW	1965	Attributed to COVID	
112	Damian	NSW	1973		Had migraines everyday for over a month after my first Pfizer jab , then two weeks with no symptoms then all of a sudden chest pains right in the middle of my chest , I knew it wasn't a panic attack as I've had panic attacks before this pain also traveled into my Adam's apple in my throat ! I was put on an ECG machine and was given a pill to open my arteries as they thought I was having a heart attack ? Which I wasn't having a heart attack and they also did x-rays on my chest and my lungs and heart were completely fine ! The doctors said it was a mystery why I was having this severe chest pain for over 7 hours straight ! And I've never felt anything like it before as the pain was also in my throat ! I guarantee it's because of the Pfizer vaccine! I will not be going back to have the 2nd one as I'm too afraid too ! I told the doctors I'd had the vaccine , but was aware I had to report it as in Australia it's voluntary to report it , which I didnt know ? If symptoms return again , I will report it !
113	Janine		1967	No reports	Perfectly healthy now with extensive tumours in liver & pancreas

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
114	Emma	NSW	1998	Not sure	This happened to my step daughter. She has been unwilling to discuss the details so far.
115	Karina	NSW	1988		I rang personal doctor and he told me it was nothing to do with the injection (started 3hrs after I was injected)
116	Bruce	Vic	1951	Not reported	Despite having a heart condition, this nans heart specialist recommended that the vax was safe. He was taken to hospital with severe chest pain & was kept overnight
117	Belinda	Vic	1989	Described as "rare"	
118	Momir				
119	Toni	Vic	1992	Inconclusive	10 minutes after my first dose of Pfizer I collapsed. Fainted and had very low blood pressure for 30 mins. They said it was a regular fainting episode and let me go. 3 days later I thought I was having a heart attack from chest pain so I presented to ED. Tests run, including bloods, echo, ECG, X-ray. They discharged me and said I did not have myocarditis or pericarditis. I was referred to a cardiologist by my GP. More tests run. He said I likely had inflammatory syndrome from the jab but said I should be ok for my second dose. My symptoms have worsened now and I am 7 weeks post-jab. I won't be getting my second. I tire easily and cannot breathe very well. Ongoing chest tightness and pain.
120	Emmy	Vic	1999	Inconclusive	Wouldn't actually say it was from the vax but was implied by all of the doctors seen.
121	Elizabeth	NSW	11/11/1977	Coincidence	Nurse told me exactly what was written on the information sheet and said it was just a coincidence and if it happened again to go to ER. My migraines we severe and pain behind my eye and blood clot came out of nose the size of my index finger then pain eased. Nose bled for 10mins.

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
122	Christopher	NSW	1941	Not reported	2 weeks after 1st dose of Pfizer, my father's long term, stable and mild Parkinson's Disease started to progress rapidly and he lost the ability to swallow. He aspirated and developed pneumonia. He never regained the ability to swallow, and aspirated severely after 5 weeks in hospital. He died 3 days later from this 2nd pneumonia. This was 8 weeks after his 1st and only dose of Pfizer COVID vaccine.
123	Joe	NSW	1997	Recorded as vaccine injury	I am reporting this on behalf of my husband who was given a deadline to get vaccinated or else risk losing his job. The GP told him that it was safe for him to take the vaccine despite him telling him his allergy history. That very night my husband started suffocating and running out of breath. The while night he couldn't breathe properly and would wake up. Next day he called his GP and reported the reaction and GP said to take inhaler and if it gets worse to see hospital. My husband's condition has not improved much. He is pretty much living with the shortness of breath now.
124	Nathan	NSW	1992	Inconclusive	
125	Mike	Qld	1954	Doctor refuses to put down that it is the vaccine reaction	Lifting my arm above parallel hurts. Even holding the steering wheel is a problem. Have had X-rays, and ultrasounds, and nothing conclusive. Have my eyes checked yearly, and today was struggling to read the eye chart with my right eye. Was told I have cataracts in both eyes. I am not sure if it is a result of reaction?
126	Brooke	NSW	1977	Described as "rare"	I felt chest pain 2 days after my vaccine. My heart was palpitating and shaking a few times a day. After a few weeks, it started to subside.
127	Ingela	Qld	1968	Inconclusive	As a fit healthy triathlete, living a very health conscious life, this has puzzled all specialists I have come across over the last 9 weeks. My dissection led to 12 hr surgery, which I survived only thanks to my fitness. No one wants to link my case to vaccine, but after every test and under the sun, there still is no "cause".

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
128			1967	Not reported	My friend had second vaccine around 3 weeks ago. She told me she had a weird feeling in her arm where she was jabbed, like it hit her bone? Now has pain up her arm when she tries to remove clothes over her head. Been 3 weeks now.
129	Alec	NSW	1991	Described as "rare"	
130	Katrina	NSW	1986	Inconclusive	Paralysis from the neck down 10 days after 2nd Pfizer vaccine
131	Kaylan	Vic	2001	Inconclusive	My 20 year old son was coerced into getting the vaccination as he was told that him being on site at his new place of employment, was risking the business a \$15,000 fine as he was unvaccinated. He was then sent to a chemist in the area to be given a vaccination or risk losing his job. The only available vaccine was Moderna, despite the high risk of pericarditis and myocarditis given his age and gender. My son is now going through the process of recovering and lost wages.
132	Darren	NSW	1979	Inconclusive	Within hours had tremors, blocked ears, blurred vision and headaches. When blocked ears and headache subsides the blurred vision disappears but getting frequent repetitive issues every few days. CT, bloodwork and vision test conducted. Steroids for eyes
133	Luisa	NSW	1958	Recorded as vaccine injury	I develop an infection on my arm is quite swollen and bruised, it was lumpy around the area of the injection, I had severe pain on my arm and the pain went up into my Neck, ear and I also had headaches. I now have a lump on my neck close to my collar bone. I have Chronic Leukaemia and I am terrified this lump is a lymph gland
134	Aminiasi	NSW	1969	No report at this stage	Slight tightness around heart presented 4 days after 1st injection. Saw a doctor after 3 weeks of persisting with heart issue. Advised doctor I believed it was related to the injection. He tried to keep an open mind. I asked for a D Dimer test. He didn't think that was necessary. Ran a

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					standard blood test, which showed my vitamin level D was very low. I am now taking vitamin D and zinc supplements.
135	Pfizer	Vic	1978	All his symptoms they linked it to heartburn when he was at hospital and we been calling doctors as everyday is new challenge for our family with new symptoms we spoken to few doctors who told us it's very common to have these symptoms just get ur 2 vaccine all will go away!!	<p>20-10-21 my partner got the vax he did not tell me but me and my kid had reaction to it my 6y old has rashes on her body 9y old headaches n nose bleeds 11y old headaches that made her throw up me rashes headaches n week apart has mood swings had my bleeding 3x once he came over I confronted him why u always felling week n headaches and u sweating none stop that's when he told us and he blacked out infront of us so atm I'm looking after him he has been taken to hospital but with in 4-5 hours they give him painkiller n gastrogel told him go home u have reflux (heartburn) he was so angry n confused as his symptoms Whr still there THEY DID NOT DO ANY X-ray or ECG told him u go to ur GP and ask him to refer u. as I took him home he started to feel more sick and by night time he lost his control of his left arm it started to go numb n couldn't lift it and his heartbeat 132 blood pressure up and ever since 20-10-2021 he has been sick stressed anxiety to what's happening to his body MIND YOU HE NEVER BEEN IN HOSPITAL IN HIS LIFE HE COULD WALK FOR 2hours and he was healthy BUT KNOW HE CANT EVEN WALK UP TO FRONT OF HOUSE WITH OUT LOSING BRATH N HEARTBEAT FAST SWEATING N HIS LEGS SHAKES ONCE HE CALMS THAT DOWN HIS STOMACH PAIN STARTS N HEADACHES AND HIS BONES ACHES. WE BEEN LOOKING FOR AN HONEST DOCTOR TO GIVE HIM Exemption as he is terrified to take 2 vaccine BUT EVERY DOCTOR WE TALK IS IGNORING US AND TELLING HIM GO GET UR SECOND VAX N ALL THIS WILL GO AWAY!!!! And yet when we ask them can they guarantee that!!! Or guarantee that he will not die or be disabled!!!? They say NO</p> <p>I AM A MUM OF 4 kids witnessing the father of my kids and the man I loved go through this is absolutely terrifying I do not sleep as I have to monitor</p>

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					his breathing or just to see if he is alive my kids are so scared to death if there father will pass out again. He did this as the government said u can't work unless u get vax for construction works he sacrificed his health to go back to work but atm what we see that he can't work as he is feeling very sick and constantly in pain and he is even scared to sleep and not wake up the next day.with god help he will recover. I JUST LIKE TO SAY THIS IS NOT A NORMAL VACCINE THIS IS A POISON VACCINE THAT BEEN USED ON US.
136	Vivianne	NSW	21/01/85	Recorded as vaccine injury	8 hours after being 2nd vaccinated with phizer I had server stomach pain and them 2 hours Later could not stop vomiting for 2 days On going. Gave me chest pains that I have never Suffered before extreme lower back pains Couldn't stand sleep nor even take my self to bathroom or shower It felt like it gave me a extreme poisoning .
137	Allan	NSW	1948	Inconclusive they said he had a stroke and passed out which may have been due to alcohol consumed on the night	This is what happened to my father. I told my family not to take these vaccines. He got letter in the mail in Australia to encourage over 70's to get it and thought he should go to the doctor. Have no idea what informed consent he got from the doctor. My sister relayed this reaction to me as we don't talk so much anymore as I am awake to this madness and they are not. My father Allan who drinks alot - yes. But he's been drinking alot for 50 years without getting dizzy, passing out and having a stroke before. Conveniently for the hospital emergency ward just a week or 2 after first injection. The chances are very very low that my father can't handle alcohol anymore after 50 years of being able to handle it.
138	Hiva	NSW	2021		Temperature was 39.5. Headache. Shevering
139	AstraZeneca	NSW	29/09/1967	Inconclusive	All medical practitioners dismissed any idea I'm unwell.

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
140	Marea	NSW	2 June 1943	Described as "rare" Doctor avoided family for days before providing the most pathetic cause as "we don't know for sure but it might have been some very rare and unexplained reaction to an antibiotic".. "but there is absolutely no likely link to the vaccine".. (note this is not verbatim)	I have this currently with the HCCC being investigated. My aunt was disabled and in a NSW Dept of Health group home care facility. My aunt had NO renal issues and was in relatively good health and very happy. She had Angelmans Syndr which meant she was like a little girl. She could not speak or write and certainly not provide informed consent. She was injected with a trial vaccine without her rights considered. She was then refused treatment and refused any acknowledgement of the likely connection or cause of her fatal death. This had a 21 expert medical panel (all hidden) carry out an investigation which has not been revealed with the family. Everything has been hidden, withheld and denied. I have been told repeatedly to cease 'my line of questioning. This is a direct link to the NSW Dept of Health's person in their care being injected and suddenly dying with ZERO acknowledgement.
141	Madeleine	NSW	1993	Verbal acknowledgement at hospital of adverse reaction to vaccine; unsure	Adverse reaction to AZ experienced by my daughter resulted in hospitalisation and tests to eliminate blood clots. Symptoms included leg pain with tingling, nausea, weakness and dizziness. Most of these symptoms took days to resolve. Symptoms increased 5 days after the first adverse event and my daughter returned to hospital for further tests. Symptoms were described as lingering adverse effects possibly combined

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
				of official report.	with anxiety. My daughter appears recovered and has returned to full-time work.
142	FRANCES	NSW	04/10 1929	Inconclusive	This is my mother's 2nd reaction. First was severe blood clot from vagina taken to hospital not allowed to visit, was rung by 3 different doctors to ask questions relating to her past history, all of which was Negative to previous blood clotting or bleeding. Second was shaking although not visible she was saying she was shaking inside, ambulance tested her oxygen and heart level, blood pressure etc, all fine and was left to be observed at home.
143	Kelly	Qld	1996	Attributed to COVID	Developed large painful lymph node in neck 24 hours after injection
144	Ben	Qld	1970		Ben was a healthy man nothing physically was wrong with him. He goes for walks/jogs every day. When ambulance arrived I advised ambulance(QAS) when Ben had vaccine (1/10) as his social worker . Ben was diagnosed with heart attack 2 x blocked arteries (blood clots). Ben was told it was hereditary and did not have anything to do with vaccine.
145	Margaret	NSW	1948	I wasn't told at the hospital it was an adverse reaction	It has taken 5 weeks to recover from the reaction. I do have cancer and had radiation 4 days previous to jab but was coping with radiation other than tiredness. I had chemo 18 months ago and am now having immunotherapy but I told friends that I would rather have chemo than go through the adverse reaction
146	Jordan	NSW	2001	Inconclusive	My son began to have left leg pain approximately 18 hours after his 2nd shot. A few hours later he had chest pain, neck pain, and headache. Difficulty breathing. To use his words "the pain is immobilising"
147		Vic	1997	Inconclusive	This is my son who has now presented to emergency department 4 times with the continuing symptoms and always told to take anti inflammatory and to come back .Drs have said they believe it is most likely to do with the

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					vaccine but never document it ..This is a real person someone's child ..This forcing of a vaccine is killing people..One glove doesn't fit all
148	Gabriella	NSW	1993	Inconclusive	Received AstraZeneca vaccine on the 10th sept 2021. Was immediately feeling unwell, tired and slept for 12 hours. The next day I broke out in hives all over my body that were very itchy. The hives travelled to different parts of my body but mostly appeared on my arms. I was also experiencing shortness of breath which hospitalised me. Doctors told me I had an allergic reaction to something and asked what I had done differently. I was quickly dismissed when I mentioned the only thing that had changed was that I had received AstraZeneca. The doctors then told me it was not the vaccine but then told me they actually did not know what the cause of the reaction was.
149	Barbara	NSW	10/09/1956	Inconclusive	
150	Anthony	SA	1967	Recorded as vaccine injury	Five days after second injection. Experienced chest pain which radiated through to the back, shoulder blades and arm. Feeling unwell and very scared. Ambulance called and transported to hospital. Tests were performed for heart damage and came back inconclusive Had a ct scan and diagnosis was degeneration of the upper spine. Was released with pain relief. Problems have continued and have had many consultations with local doctors. On one occasion, got to speak to a doctor from Sydney over the phone. Doctor stated definite reaction from Pfizer injection.
151	James	NSW	1990	This was not reported until now	My partner went and had the Pfizer vaccination, he was told that it was safe. That same night he couldn't walk and had severe shakes and chills which then went into the next day. He had the next day off work. This isn't right for a vaccine to give you this kind of side affects regardless. The chills

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					and shakes were very concerning. He also had a bad fever and could not stop shaking for hours.
152	Bianca		1986	Recorded as vaccine injury Inconclusive	Approx 2 week after I received my first vaccine I started to experience daily migraines. On 11/9/21 I started to get increasingly numbness and tingling down my left side of body. I presented to hospital whereby I was observed and then sent home stating it was a nervous system reaction. I still experience numbness n feeling of a pinch nerve.
153	Ljuba	NSW	1943	Inconclusive	Under the guise of 'it's for her health' my grandmother was forced to have this without her knowing the extent of what could happen by her nursing home - she has dementia. We were advised that it's a must in order for her to stay. She had no previous health issues regarding her stomach, kidneys or liver. After her second dose she was rushed to the ICU with a gall bladder infection and multiple gall stones that miraculously appeared. She was on her deathbed and we were told to say our goodbye's. She pulled through after a month in ICU but barely.
154	Alissa		1993	Recorded as vaccine injury	I had the first dose of Pfizer, immediately felt terrible but didn't say anything because I thought that I was overthinking it and that I was most probably fine. I immediately had a terribly sore arm on injection site and felt very very weak. The very next day I developed severe chest pain beyond any pain I have ever experienced. I became short of breath and presented to a local gp who sent me straight to emergency for further investigations as he thought it was myocarditis associated with Pfizer vaccine. There I had a chest X ray, ECG and blood test all of which came back normal, however I was monitored for 7 hours just in case my heart did something funny. I was eventually discharged. I have since seen a cardiologist and three gps who will not medically exempt me from further doses because there is no 'scientific data' showing any changes to my

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
					'normal functioning'. I still have transient chest pain and shortness of breath over a month later.
155	Jaide	NSW	2000	Described as "rare"	<p>been hospitalised 3 times now</p> <p>1st time: I was discharged with the diagnosis of “it’s just the side effects of the vaccine” “muscular pain in your chest” sent home with no follow ups just Panadol/nurofen.</p> <p>I got more scans done elsewhere referred by my GP and ended up having 2 blood clots on my lungs. I was mistreated, dismissed, misdiagnosed and looked upon that it was just a effect from the vaccine.</p> <p>2nd time: readmitted treated for blood clots put on blood thinners for the next 12 months.</p> <p>3rd time: went back in still struggling with my breathing and chest pain. Sent home and told can’t do anything more for me.</p> <p>I had all aside effects of constant shaking, muscle ache, joint pain, headache, abdominal pain, nausea, vomiting, tenderness, tiredness, hot & cold chills, severe chest pain, shortness of breathe to a point I passed out before walking into the hospital.</p>
156	David	NSW	1959		Since vaccination lb have experienced mild vertigo and dizziness
157	Shadaab	NSW	15/11/1983	Recorded as vaccine injury Described as "rare"	I had to relinquish my shift as I had difficulties continuing my shift due to the symptoms. I was extremely light headed, my heart was racing and I was panicking as I've never had this sensation before. I had to get an ambulance and ecg results indicated heart palpitations. I was taken to hospital and a chest x ray was conducted however no inflammation was detected.
158	Grant	Qld	1973	Inconclusive	When I was double dosed, every kept asking me how it was and gave me high fives. The attention annoyed me. They all asked me what adverse events I had, and I had none to talk about. I did not feel very special.
159	M S	NSW	1937	Inconclusive	Doctor, hospital and nursing home all deny the possibility of symptoms being a reaction yo Pfizer injection.

	Vaccine recipient	State or Territory	Year of birth	Official Reporting	Narrative:
160	Vic	NSW	1967	None	Since taking the 1st dose I have had constant headaches almost daily. Have never had headaches like this before. Headaches are rare for me. I am constantly exhausted despite not feeling this way prior.
161	Elizabeth	NSW	1955	Described as "rare"	Has to have friend nearby in case of episode. 2nd dose implication worse than first
162	Vikas		1982	Inconclusive	Very healthy man and friend of mine with no health problems gose to hospital of sudden pain in stomach Friday dies Saturday they say from kidney failure..
163	Scott	NSW	1980	Attributed to COVID	Uncle provided patient with Zelenko protocol for improved outcome
