Create ➔ Analyze ➔ Edit ➔ Collaborate ➔ Deliver
V-Station HD Projects—Offline

V-Station® HD

PostTools™

Why V-Station HD PostTools

Once the video recording phase of your V-Station HD project is finished, you'll need to explore, evaluate, edit, and then distribute the content. With a click of a button, simply transfer the V-Station HD project to a PC running PostTools. Now, you and your creative team can review the footage, recreate the shoot with up to 8 camera angles, make line cuts, and log your notes. Encode in different formats, resolution, and frame rates and you can then upload the edited reel to your FTP sites, Send to a LAN, or USB Jump drive, or upload to YouTube. All this—and more—can be done efficiently on compatible PCs running Windows 7 or 10 x64 operating systems.

Familiar Interface & Simple-To-Transfer Projects

PostTools incorporates the same user interface design and features found in our V-Station HD Multi-Channel Recording Systems & Packages—except for the capture functions. All the project's clips, line-cuts, metadata including playlists, logs, shot lists, and edit decision lists are easily transferred over to PostTools in a simple and easy step.

V-Station HD Project-based Workflow—Offline

Feature-rich PostTools software allows users—and colleagues—to seamlessly continue with the project after recording is completed. This is just some of what can be accomplished:

- **Import Projects (clips, playlists, logs, EDLs, & metadata) from V-Station HD.**
- **Review & Log Events with description for any frame.**
- **Re-create the live shoot with synchronized play back with Multi-View®.**
- **Perform line-cuts with AutoProducer® while playing back & then render into different formats, resolutions, and frame rates.**
- **Segment original video clips into separate sub-clips.**
- **Make proxies for low-resolution use.**
- **Extract embedded audio from clips into separate audio files.**
- **Replace audio into line cuts (ADR) or original footage.**
- **Upload results to YouTube or FTP sites.**

Synchronized Playback Of Recorded Clips

The Multi-View® media player will synchronously play back all your clips showing each angle as they were originally shot.

Re-Cut Original Footage

You can perform virtual live switching, but at your pace, between camera angles to create as many alternate line-cut versions as needed for your project or your client without other editing software.

Seamless Project Transfer To Leading Editing Software

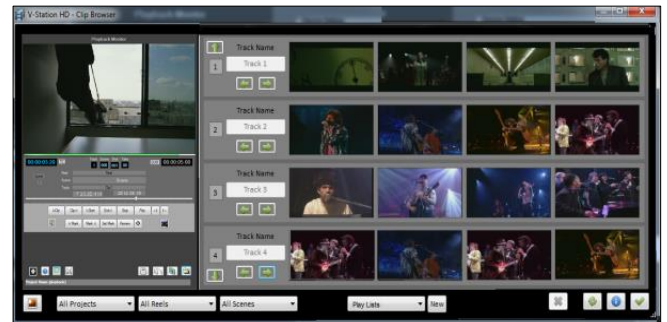

With a mouse click, V-Station PostTools projects can be transferred to your editing software. The clips will be automatically organized into bins and sequences (generated from the EDL)—already synchronized. No more tedious hours trying to locate the desired shot or clip. Premiere Pro, Final Cut Pro, and Vegas Pro are supported.

Full-Featured Clip Media Player & Clip Library Browser

Play back (at various speeds) any of the projects' clips and step forward or backward frame-by-frame. Pull up the playlist by project and review your footage. Add notations for key events—at any frame position—for immediate access to marked events.

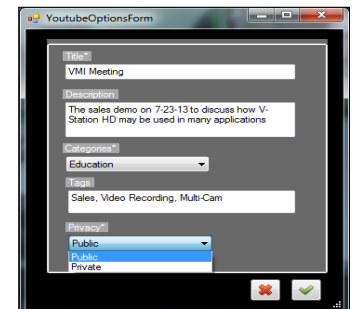

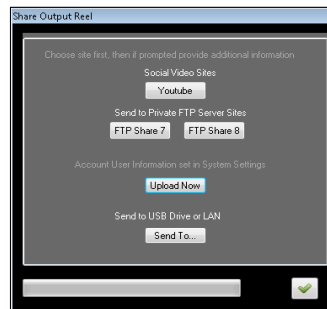

Above: Clip Media Player Panel • Below: Clip Library Browser Panel

Distribute Your Project

A click of your mouse will send your V-Station HD project to a LAN server, a FTP site, or upload to YouTube for immediate access by your colleagues and clients—wherever they may be.
